

SciBase moves to new premises in Sundbyberg

SciBase has recently moved from its premises in downtown Stockholm to newly renovated premises in Sundbyberg, a part of greater Stockholm. The new address is Landsvägen 39, directly across from the Sundbyberg train station.

- When it was time to renegotiate our rental agreement we did a review of our situation and saw that our needs had changed. Through the relocation we now have an office that is more suited for our current activities, as well as being cost-efficient, says Simon Grant, CEO of SciBase.

The Company's other contact information, such as postal address and telephone, remains unchanged. The new visiting address is Landsvägen 39, 172 63 Sundbyberg.

About SciBase and Nevisense

SciBase AB is a Swedish medical technology company, headquartered in Stockholm that has developed a unique point-of-care device for the accurate detection of malignant melanoma. Its product, Nevisense, helps doctors to detect malignant melanoma, the most dangerous type of skin cancer. SciBase was founded by Stig Ollmar, Associate Professor at The Karolinska Institute in Stockholm, Sweden. Nevisense is based on substantial research and has achieved excellent results in the largest clinical study ever conducted on the detection of malignant melanoma. Nevisense is CE marked in Europe, has TGA approval in Australia, and is awaiting FDA clearance in the United States. Nevisense is based on a method called Electrical Impedance Spectroscopy (EIS), which uses the varying electrical properties of human tissue to categorize cellular structures and thereby detect malignancies. SciBase is listed on Nasdaq First North ("SCIB"). Avanza is the certified advisor. Further information is available on www.scibase.com.
