SciBase announces a Management team change

Anna Danström, SciBase's head of production and supply chain, has chosen to leave her position and accept a role at another company. Linn Olsen will replace Anna as production and supply chain manager. Linn has a broad background within production, QA and Medtech, and comes from Trimble.

"I would like to take the opportunity to thank Anna for her exceptional work at SciBase, and especially at our Uppsala facility. Anna has ensured that we have a well-functioning electrode manufacturing process and team and has also played a key role in improving our electrode gross margin. I wish Anna all the best in her future role, and welcome Linn to the team", says Simon Grant CEO SciBase.

About SciBase and Nevisense

SciBase AB is a Swedish medical technology company, headquartered in Stockholm that has developed and sells a unique point-of-care device for evaluation of skin disorders such as skin cancer and atopic dermatitis. Its first product, Nevisense, helps doctors to detect malignant melanoma, the most dangerous type of skin cancer. Further development has led to Nevisense also being used as a tool to assess the skin barrier and inflammation. SciBase was founded by Stig Ollmar, Associate Professor at The Karolinska Institute in Stockholm, Sweden. Nevisense is based on substantial research and has achieved excellent results in the largest clinical study ever conducted on the detection of malignant melanoma. Nevisense is CE marked in Europe, has TGA approval in Australia and an FDA approval (PMA) in the United States. Nevisense is based on a method called Electrical Impedance Spectroscopy (EIS), which uses the varying electrical properties of human tissue to categorize cellular structures and thereby detect malignancies and abnormalities. SciBase is listed on First North Growth Market ("SCIB"). Further information is available at www.scibase.com.
