

# SciBase Initiates Self-Pay Model in the US to Make Nevisense Test More Accessible to Patients

SWEDEN – June 9, 2025 – SciBase Holding AB ("SciBase") [STO: SCIB], a leading developer of augmented intelligence-based solutions for skin disorders, today announced the launch of the Nevisense Self-Pay Program in the US, a new initiative designed to improve patient access to the Nevisense test outside of traditional insurance coverage. The program is being implemented at dermatology practices enrolled in the self-pay solution and addresses increasing demand for the Nevisense test directly from patients and dermatologists. SciBase has enrolled several practices located throughout the US and plans to further expand the program to meet clinician and patient needs.

Driven by evolving standards of care and a growing clinical emphasis on early detection, dermatologists have shown a strong interest in making Nevisense available to patients irrespective of payer status. The new Self-Pay Program empowers clinicians to incorporate Nevisense into their diagnostic workflow sooner – ensuring that patients at risk for melanoma are not left waiting due to insurance limitations.

*"We continue to work diligently to expand payer coverage and reimbursement, but we also recognize the urgent need for early detection," said Pia Renaudin, CEO of SciBase. "The Self-Pay Program is a critical step in making Nevisense more widely available to clinicians and patients who value early, accurate melanoma detection at the point of care."*

As melanoma rates continue to rise globally, the importance of early diagnosis has never been greater. Nevisense offers a point-of-care solution that enhances clinical decision-making and supports earlier detection – ultimately improving outcomes and reducing the long-term burden on healthcare systems.

With the introduction of the Self-Pay Program, SciBase is reinforcing its commitment to innovation, access, and sustainable healthcare. The initiative enables more patients to benefit from Nevisense while helping clinicians deliver exceptional care through early melanoma detection.
